ABOUT ARIZONA MIGRATION SOURCES

The state of Arizona does not produce a migration product at this time. The information available for migration is sourced through the United States Census Bureau.

Currently, the Census Bureau offers migration data from the following current data sources:

- American Community Survey (Table: S0701. Geographic Mobility by Selected Characteristics in the United States)
- Current Population Survey
- Decennial Census
- Income of Program Participation
- Geographic Mobility/Migration
- Population Estimates and Projections
- Statistical Abstract of the United States

In the interest of data containing *County to County In-Flow and Out-Flow* regarding the state of Arizona, this data is currently limited to the decennial Census 2000.

There is another source of data which uses IRS Tax information to look at migration flows. The *Missouri Census Data Center* has a web application that will generate a migration profile with data regarding movement into and out of the chosen county based on tracking movement reflected in IRS tax returns in consecutive tax years. Please note that this data is not a one-hundred percent migration flow count, but can indicate a possible migration trend. It can be found at the following link:

- http://mcdc2.missouri.edu/pub/data/irsmig/Migration_Profiles/Arizona.html

Please be sure to read all the relevant documentation on this dataset so that you understand the best way to view and use the data.

Among Arizona's administrative records, there is data that may be helpful in understanding some trends in migration to and from other states. This data is the Out-of-State Driver Licenses Surrendered.

Again, please be sure to read all the relevant documentation on this dataset so that you understand the best way to view and use the data.
